

Crypto-Finance

In the art market now, they are cultivating core values through branded artists, mega-galleries, investor collecting, superstar art fairs, illicit flows, freeports and tax-havens. But behind the scenes and on the sidelines of all this, there are gift-economy gatherings, crowd-sourced startups, high-frequency-traders, crypto-currencies, and data-driven virtual trade. We are now living in a thriving economy. This new economy we live in is all about competing for the future by creating new products or services or transforming new businesses to be what they couldn't be yesterday.

Now with digitally-networked transactions, diffusion, exchange, and value, opens a world that handles economic trade with more value and can revolutionize value transfer. Bitcoin plays a huge roll in our economic digital forms industry, it also opens many doors to trade underground and away from the eye of the government. This is where many new investments are pouring in and as this keeps going, Blockchain could be one of the keys innovations enabling the digital economy to move beyond decentralized communications and into an era of decentralized value exchange. There are also micropayments in which by effectively taking out minimum transaction costs, even the smallest Blockchain-enabled transfers can be carried out between parties located anywhere in the world. This could destabilize the business model for international wire transfers in less time than people think.
